**Feathers in Reverse** Jan 26 2022 Feathers in Reverse is the ideal gift for a loved one who is scared of poetry. It engages and immerses readers with the luring subtlety of a serpent. Themes treated include good and evil, heaven and earth, man and woman, birth and death, urbanism and rural life, wealth and poverty. As much as the poet highlights salient issues and conflicts in everyday life, he suggests answers to burning problems as well. A common thread runs through the over 300 poems feathered and featured in this collection. The notion of the 'feather' is cross-cultural. It reminds us of the feather used as a pen in ancient Europe and the 'red feather' that is stuck on the caps of African notables as a mark of distinction. Feathers in Reverse is a magic pudding to be sampled, shared and indulged.

The Life of Gregory Zilboorg, 1940–1959 Nov 04 2022 The Life of Gregory Zilboorg, 1940–1959: Mind, Medicine, and Man is the second volume of a meticulously researched two-part biography of the Russian-American psychoanalyst Gregory Zilboorg and chronicles the impact of the Second World War on his work and thinking as well as his divorce, remarriage, and conversion to Catholicism. With extensive references to Zilboorg's writing and politics, this book demonstrates the significance of his contributions to the fields of psychiatry and psychoanalysis in

the context of his tumultuous intellectual, personal, and spiritual life. In his late work, he would argue, controversially, that there was no incompatibility between psychoanalysis and religion. Grounded in a wealth of primary source material and impressive research, this book completes the compelling biography of a major figure in psychoanalysis. It will be of interest to general readers as well as scholars across a range of disciplines, particularly the history of psychoanalysis and religion.

**The Comparative Development of Adaptive Skills** Aug 21 2021 Originally published in 1985, the aim of this book was to examine the development of adaptive skills in a comparative context. Comparative explorations have evolutionary implications. Thus it is inevitable that the contributors to this volume, all of whom come to the study of development with a comparative perspective, manifest concern with the relationships between ontogeny and phylogeny. In this volume both field and laboratory approaches are presented. It is quite clear that the laboratory studies are increasingly informed by ecological considerations that derive from field excursions. It is also the case that laboratory findings are becoming an essential source in directing field inquiries. The problems explored are theoretically rich and methodically significant and the comparative scope of the contributions range widely among vertebrate species.

**Cancer Rehabilitation** Sep 02 2022 A Doody's Core Title 2012 This new comprehensive reference provides a state-of-the-art overview of the principles of cancer care and best practices for restoring function and quality of life to cancer survivors. Authored by some of the world's leading cancer rehabilitation experts and oncology specialists, the principles section provides primer level discussions of the various cancer types and their assessment and management. The practice section thoroughly explores the identification, evaluation, and treatment of specific impairments and disabilities that result from cancer and the treatment of cancer. This groundbreaking volume enables the entire medical team to provide superior care that results in a better quality of life for cancer survivors. Features include: Multi-specialty editorship and authorship from psychiatry, oncology, physical therapy, occupational therapy, and related disciplines. Focus on therapeutic management of cancer-related impairments and complications. In-depth treatment of the medical, neurologic, musculoskeletal, and general rehabilitation issues specific to this patient population.

*Multiple Sclerosis* May 30 2022 Multiple sclerosis is a chronic and often disabling disease of the nervous system, affecting about 1 million people worldwide. Even though it has been known for over a hundred years, no cause or cure has yet been discovered-but now there is hope. New therapies have been shown to slow the disease progress in some patients, and the pace of discoveries about the cellular machinery of the brain and spinal cord has accelerated. This book presents a comprehensive overview of multiple sclerosis today, as researchers seek to understand its processes, develop therapies that will slow or halt the disease and perhaps repair damage, offer relief for specific symptoms, and improve the abilities of MS patients to function in their daily lives. The panel reviews existing knowledge and identifies key research questions, focusing on: Research strategies that have the greatest potential to understand the biological mechanisms of recovery and to translate findings into specific strategies for therapy. How people adapt to MS and the research needed to improve the lives of people with MS. Management of disease symptoms (cognitive

impairment, depression, spasticity, vision problems, and others). The committee also discusses ways to build and financially support the MS research enterprise, including a look at challenges inherent in designing clinical trials. This book will be important to MS researchers, research funders, health care advocates for MS research and treatment, and interested patients and their families.
