The Poetics of Dante's Paradiso May 16 2021 `In the world of Dante scholarship, there is a real need for studies such as The Poetics of Dante's Paradiso, which challenge our notions of the principal souls of the Paradiso. Rooted in a close analysis of the poem, Massimo Verdicchio's intelligent interpretation is supported by relevant textual evidence and provides an important counterpoint to the canonical readings of the cantica. Traditional readings of Dante's Paradiso have largely considered this third

cantica of the Commedia as a poem apart. It deals with those blessed souls in Paradise who are free of sin and beyond punishment, in contrast to the sinners in the previous two cantica, and is thus no longer based on the principle of contrapasso. At the literal level this is true in that all the characters one encounters are either those who have been saved, religious leaders, or saints. However, at the allegorical level, as Massimo Verdicchio argues in The Poetics of Dante's Paradiso, the blessed souls still have something to hide, something shameful

in their past earthly life, which is revealed nonetheless. In this book, Verdicchio provides a canto-by-canto analysis of Paradiso. He maintains that the cantica can allegorically be seen as a commentary on the political and religious establishment, framed as the punitive action of the DXV announced at the end of Purgatorio, denouncing the illicit and destructive alliance between the House of Anjou and the Church. Verdicchio focuses on the relationship that Dante establishes among the ten heavens, into which the poet divides the cantica and their equivalent in the Arts and Sciences of the Trivium and Quadrivium, as outlined in the Convivio. This approach provides the key to interpreting the cantos and the discourse of the inhabitants of Paradise who appear, on the surface, blameless. However, it is the earthly and human side of the blessed souls that captures Dante's attention, and this dichotomy is revealed in his characterization of the heavens. Poetic allegory and irony are the two principal modes of this cantica, and the source of much of its comedic complexity. As one of the characters puts it, in Heaven 'we do not repent but we smile.' A highly original and comprehensive reading, *The Poetics of Dante's Paradiso* demonstrates that the intricacies of Dante's text reveal subversive undercurrents and a subtle irony, employed to deliver a critique of the Church and Empire of his own time.

Antiviral Agents Mar 26 2022 The unfortunate appearance of AIDS, the manifold problems with herpesviruses and other viruses attacking humans have led to an enormous dynamism of worldwide research and to an immense increase in the corresponding literature. With this first Special Topic of the monograph series *Progress in Drug Research*, the editor and the publishers undertake an effort to supply concise reviews on virus research, especially on the development of new and future antiviral agents in some important and widespread viral diseases. Latest *Progress in Drug Research* articles dealing with new chemotherapeutics for the treatment of the most threatening viral diseases are presented. These very well received articles were upgraded and supplemented with new chapters to form this actual overview of the achievements in the respective fields of virus research. This special

volume contains six review articles covering the latest studies on the HIV and hepatitis C and B viruses...

Diagnóstico Por Imagen En Dermatología Aug 26 2019 Diagnóstico por imagen en dermatología cubre las más importantes técnicas de imagen diagnóstica empleadas en la especialidad, tanto desde un punto de vista clínico como por lo que respecta a las implicaciones de su uso en investigación. Se abordan no solo las aplicaciones actuales sino también las tendencias futuras de este campo en constante y rápida evolución, proporcionando a clínicos e investigadores una comprensión clara y precisa de las ventajas y retos del empleo actual de las diversas técnicas de imagen en dermatología, incluyendo sus efectos a nivel celular y molecular. Proporciona información sobre un extenso repertorio de técnicas, desde las más convencionales hasta las más novedosas, desde un punto de vista clínico y de investigación. Aborda el diagnóstico por imagen de enfermedades como la queratosis actínica, el melanoma cutáneo, el carcinoma de células de Merkel, la hidradenitis supurativa, etc. Es de fácil consulta gracias a la estructura clara y sistemática de la información, ilustrada con numerosas fotografías e imágenes en color. Se dirige a dermatólogos clínicos y a investigadores en las áreas de dermatología, radiología, farmacéutica, biología molecular, diagnóstico y tratamiento del cáncer, y biotecnología. Obra que contiene toda la información esencial para el empleo de las técnicas de imagen en el diagnóstico, tratamiento, monitorización y análisis de las enfermedades cutáneas, de la mano de un prestigioso equipo de expertos. Cubre las más importantes técnicas de imagen diagnóstica empleadas en la especialidad, tanto desde un punto de vista clínico como por lo que respecta a las implicaciones de su uso en investigación. Graphical Heritage Feb 10 2021 This book presents the proceedings of the 18th International Conference on Graphic Design in Architecture, EGA 2020, focusing on heritage - including architectural and graphic heritage as well as the graphics of heritage. The third of three volumes, this book discusses topics related to mapping, cartography and landscape, as well as innovative education methods, particularly in the context of teaching architectural heritage. It covers historical cartography and new cartographies, as well as methods for representing the landscape, and reports on different learning methods and practices, including classroom methods but also those involving more active participation and multidisciplinary and collaborative production. Given its scope, this book will appeal cartographers, designers and teachers, providing them with extensive information on innovative methodologies and a source of inspiration for their future work.

Descriptive Geometry, The Spread of a Polytechnic Art Sep 19 2021 This book seeks to explore the history of descriptive geometry in relation to its circulation in the 19th century,

which had been favoured by the transfers of the model of the École Polytechnique to other countries. The book also covers the diffusion of its teaching from higher instruction to technical and secondary teaching. In relation to that, there is analysis of the role of the institution - similar but definitely not identical in the different countries - in the field under consideration. The book contains chapters focused on different countries, areas, and institutions, written by specialists of the history of the field. Insights on descriptive geometry are provided in the context of the mathematical aspect, the aspect of teaching in particular to non-mathematicians, and the institutions themselves.

Mathematische Werke / Mathematical Works Jun 24 2019 Für die meisten Mathematiker und für viele mathematische Physiker ist der Name Erich Kähler eng verbunden mit wichtigen Begriffen der Geometrie wie zum Beispiel Kähler-Metrik, Kähler-Mannigfaltigkeiten und Kähler-Gruppen. Diese Begriffe gehen alle auf ein 14-seitiges Papier aus dem Jahr 1932 zurück. Dabei handelt es sich jedoch nur um einen sehr kleinen Teil der vielen herausragenden Leistungen Käblers, die ein ungewöhnlich breites Spektrum umfassen: Von der Himmelsmechanik gelangte er zur komplexen Funktionentheorie, zu Differenzialgleichungen, zu analytischer und komplexer Geometrie mit Differenzialformen und schließlich zu seinem eigentlichen Hauptthema, der arithmetischen Geometrie, in der er ein Begriffssystem schuf, das der Vorläufer des heute verwendeten Systems von Grothendieck und Dieudonné ist und in weiten Teilen mit diesem übereinstimmt. Sein Hauptinteresse war es, die Gemeinsamkeiten in der Vielfalt der mathematischen Themen zu finden und so

Mathematik als universelle Sprache zu etablieren.

Through A Classical Eye Jan 12 2021 As students and scholars of Boccaccio, Chaucer, and Dante know, late medieval writers were influenced greatly by the work of peers that crossed historical, national, cultural, linguistic boundaries. Through a Classical Eye contains first-rate essays that demonstrate a range of strategies for undertaking transcultural and transhistorical studies of the late medieval period, and examines medieval literature and culture where English, Italian, and Latin materials overlap. Written in honour of the groundbreaking contributions that Winthrop Wetherbee made to this growing area of study, the volume's contributors advance his legacy and add to the burgeoning interest in setting medieval literary studies into wide intellectual and historical horizons. Divided into three illuminating sections on Medieval Latin authorship, Italy and the world, and England and beyond, and including a personal reminiscence of Wetherbee by the noted novelist Robert Morgan, Through a Classical Eye is an outstanding collection that provides key insights into medieval literature and culture.

The Symbolic Universe Jul 06 2020 With the development of the theory of relativity by Albert Einstein, physics underwent a revolution at the end of the 19th century. The boundaries of research were extended still further when in 1907-8 Minkowski applied geometrical ideas to this area of physics. This in turn opened the door to other researchers seeking to use non-Euclidean geometrical methods in relativity, and many notable mathematicians did so, Weyl in particular linking these ideas with broader philosophical issues in mathematics. The Symbolic Universe gives an overview of this exciting era, giving a full account for the first time of Minkowski's geometric reformulation of the theory of special relativity.

Proceedings of the Fourth International Congress on Mathematical Education Feb 22

2022 Henry O. Pollak Chairman of the International Program Committee Bell Laboratories Murray Hill, New Jersey, USA The Fourth International Congress on Mathematics Education was held in Berkeley, California, USA, August 10-16, 1980. Previous Congresses were held in Lyons in 1969, Exeter in 1972, and Karlsruhe in 1976. Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries; at least half of these come from outside of North America. About 450 persons participated in the program either as speakers or as presiders; approximately 40 percent of these came from the U.S. or Canada. There were four plenary addresses; they were delivered by Hans Freudenthal on major

problems of mathematics education, Hermina Sinclair on the relationship between the learning of language and of mathematics, Seymour Papert on the computer as carrier of mathematical culture, and Hua Loo-Keng on popularising and applying mathematical methods. George Polya was the honorary president of the Congress; illness prevented his planned attendance but he sent a brief presentation entitled, "Mathematics Improves the Mind". There was a full program of speakers, panelists, debates, miniconferences, and meetings of working and study groups. In addition, 18 major projects from around the world were invited to make presentations, and various groups representing special areas of concern had the opportunity to meet and to plan their future activities.

Programming Environments for Massively Parallel Distributed Systems Jun 16 2021

Massively Parallel Systems (MPSs) with their scalable computation and storage space promises are becoming increasingly important for high-performance computing. The growing acceptance of MPSs in academia is clearly apparent. However, in industrial companies, their usage remains low. The programming of MPSs is still the big obstacle, and solving this software problem is sometimes referred to as one of the most challenging tasks of the 1990's. The 1994 working conference on "Programming Environments for Massively Parallel Systems" was the latest event of the working group WG 10.3 of the International Federation for Information Processing (IFIP) in this field. It succeeded the 1992 conference in Edinburgh on "Programming Environments for Parallel

Computing." The research and development work discussed at the conference addresses the entire spectrum of software problems including virtual machines which are less cumbersome to program; more convenient programming models; advanced programming languages, and especially more sophisticated programming tools; but also algorithms and applications.
