Adopting Circular Economy Current Practices and Future Perspectives Jul 26

2019 The development of a closed-loop cycle is a necessary condition so as to develop a circular economy model as an alternative to the linear model, in order to maintain the value of products and materials for as long as possible. For this motive, the definition of the value must be demonstrated for both the environment and the economy. The presence of these analyses should be associated with the social dimension and the human component. A strong cooperation between social and technical profiles is a new challenge for all researchers. End of life of products attract a lot of attention, and the final output could be the production of technologies suitable for managing this waste.

Apr 26 2022 This powerful and timely analysis takes stock of race and education sixty years after the historic Brown vs. Board of Education decision. This volume examines education as one of the most visible markers for racial disparities in the US as well as one of its most visible frontiers for racial justice. Featuring original research, educators' insights, and perspectives from communities of color, it documents the complex impact of social/educational policy on social progress. Chapters on charter schools, curriculum content, performance measurement, and disproportionalities in special education referrals shed light on entrenched inequities that must be confronted. The book also makes it clear that leveling the playing field calls for not only better schools, but also addressing pervasive social problems such as poverty and housing segregation. Included in the coverage: School Policy is Housing Policy: Deconcentrating Disadvantage to Address the Achievement

Gap. Charter Schooling, Race Politics, and an Appeal to History. The Data Quality Movement for the Asian American and Pacific Islander community: an unresolved civil rights issue. Critical Ethnic Studies in High School Classrooms: Academic Achievement via Social Action. Mexican American Educational Stagnation: The Role of Generational Status, Parental Narratives and Educator Messages. p/pp Pinpointing crucial issues and opportunities for solutions, Race, Equity, and Education has immediate salience for educators and researchers studying the intersection of race and education.

Is Geography Destiny? Jul 06
2020 For decades, the
prevailing sentiment was that,
since geography is
unchangeable, there is no
reason why public policies
should take it into account. In
fact, charges that geographic
interpretations of development
were deterministic, or even
racist, made the subject a
virtual taboo in academic and
policymaking circles alike. 'Is
Geography Destiny?'
challenges that premise and
joins a growing body of
literature studying the links
between geography and
development. Focusing on
Latin America, the book argues
that based on a better
understanding of geography,
public policy can help control
or channel its influence toward
the goals of economic and
social development.

during the course of the last few decades. The fields of astronomy and astrophysics are making new connections to physics, chemistry, biology, and computer science. Based on a broad and comprehensive survey of scientific opportunities, infrastructure, and organization in a national and international context, *New Worlds, New Horizons in Astronomy and Astrophysics* outlines a plan for ground- and space- based astronomy and astrophysics for the decade of the 2010's. Realizing these scientific opportunities is contingent upon maintaining and strengthening the foundations of the research enterprise including technological development, theory, computation and data handling, laboratory experiments, and human resources. *New Worlds, New Horizons in Astronomy and Astrophysics* proposes enhancing innovative but moderate-cost programs in space and on the ground that will enable the community to respond rapidly and flexibly to

new scientific discoveries. The book recommends beginning construction on survey telescopes in space and on the ground to investigate the nature of dark energy, as well as the next generation of large ground-based giant optical telescopes and a new class of space-based gravitational observatory to observe the merging of distant black holes and precisely test theories of gravity. *New Worlds, New Horizons in Astronomy and Astrophysics* recommends a balanced and executable program that will support research surrounding the most profound questions about the cosmos. The discoveries ahead will facilitate the search for habitable planets, shed light on dark energy and dark matter, and aid our understanding of the history of the universe and how the earliest stars and galaxies formed. The book is a useful resource for agencies supporting the field of astronomy and astrophysics, the Congressional committees with jurisdiction over those agencies, the scientific

**Transposable Elements and
Genome Evolution** Jan 24

2022 Once considered merely
'selfish' or 'parasitic' DNA,
transposable elements are
today recognized as being of
major biological significance.
Not only are these elements a
major source of mutation, they
have contributed both directly
and indirectly to the evolution
of genome structure and
function. On October 8-10,
1999, 100 molecular biologists
and evolutionists representing
11 countries met on the
campus of The University of
Georgia in Athens for the
inaugural Georgia Genetics
Symposium. The topics of
presentations ranged from how
the elements themselves have
evolved to the impact
transposable elements have
had on the evolution of their
host genomes. The papers in
this volume therefore represent
state-of-the-art thinking, by
leading world experts in the
field, on the evolutionary
significance of transposable
elements.
