<u>The Testing Backlash</u> Oct 23 2021 Parents, teachers, school administrators, citizens, and legislators from both sides of the political spectrum have seen an explosion of standardized testing in public schools. Their message has been clear and remarkably consistent despite the divergent sources of discontent: We have gone much too far in the amount of testing students endure in the United States in our public schools, and a re-evaluation of testing is long overdue. In 2015, a backlash against testing grew and grew, culminating in zero students participating in testing in some schools, particularly in Boulder, Colorado. This book describes the reasons for the backlash and suggests some remedies to

improve the way testing is used in public schools in the United States. Do schools in the United States have room for improvement? Of course. This book argues that relying on standardized testing confuses the diagnosis for the cure.

Computer-based Language Testing: C-Test vs. Rapid Profile Sep 02 2022 Seminar paper from the year 2006 in the subject English Language and Literature Studies – Linguistics, grade: 1,0, University of Paderborn, course: Einführung in die Informations- und Kommunikationstechnologien: Electronic Tools and Resources for Linguists, 11 entries in the bibliography, language: English, abstract: Testing is an important part of language teaching. Tests can be used to place students in courses according to their knowledge, to diagnose their strengths and weaknesses, to identify their proficiency etc. There are many theories about what tests should analyse and how they should be taken. Depending on the relevance of the results, tests need to be more or less accurate. Furthermore, they should have a beneficial backwash on teaching. It is thus at least as important to examine testing itself.

Teaching and Evaluating Writing in the Age of Computers and High-Stakes Testing Aug 09 2020 This book takes on a daunting task: How do writing teachers continue to work toward preparing students for academic and real-world communication situations, while faced with the increasing use of standardized high-stakes testing? Teachers need both the technical ability to deal with this reality and the ideological means to critique the information technologies and assessment methods that are transforming the writing classroom. Teaching and Evaluating Writing in the Age of Computers and High-Stakes Testing serves this dual need by offering a theoretical framework, actual case studies, and practical methods for evaluating student writing. By examining issues in writing assessment--ranging from the development of electronic portfolios to the impact of state-wide, standards-based assessment methods on secondary and post-secondary courses--this book discovers four situated techniques of authentic assessment that are already in use at a number of locales throughout the United States. These techniques stress: *interacting with students as communicators using synchronous and asynchronous environments; *describing the processes and products of student learning rather than enumerating deficits; *situating pedagogy and evaluation within systems that incorporate rather than exclude local variables; and *distributing assessment among diverse audiences. By advocating for a flexible system of communication-based assessment in computer-mediated writing instruction, this book validates teachers' and students' experiences with writing and also acknowledges the real-world weight of the new writing components on the SAT and ACT, as well as on state-mandated standardized writing and proficiency exams.

Tests that Second Language Teachers Make and Use Apr 16 2021 Classroom tests are an everyday feature of second and foreign language classrooms worldwide. Teachers spend a lot of time and energy making and using tests, and learners spend of lot of time and energy taking them. Nonetheless, such assessments are under-studied, as they are considered routine. This volume illuminates this little-researched area. Featuring fifteen classroom language tests made and used by Chinese, English, French, German, Italian, Japanese, Russian, and Spanish teachers, the book includes parallel teacher commentary and testing content chapters that transparently probe the teachers' processes of making and using their tests. Rather than view teachers' tests as poor shadows of what professional test writers do, this work identifies the reasoning behind teachers' tests. In addition, focused testing content chapters take examples directly from the actual tests and the accompanying teacher commentary. This book is an accessible, applied resource for second and foreign language teachers, language program administrators working with teachers, students in teacher preparation and enrichment programs, and scholars in language teaching, learning, and testing.
