New Theory of the Earth Oct 28 2019 New Theory of the Earth is an interdisciplinary advanced textbook on the origin, composition, and evolution of the Earth's interior: geophysics, geochemistry, dynamics, convection, mineralogy, volcanism, energetics and thermal history. This is the only book on the whole landscape of deep Earth processes which ties together all the strands of the subdisciplines. It is a complete update of Anderson's Theory of the Earth (1989). It includes many new sections and dozens of new figures and tables. As with the original book, this new edition will prove to be a stimulating textbook on advanced courses in geophysics, geochemistry, and planetary science, and supplementary textbook on a wide range of other advanced Earth science courses. It will also be an essential reference and resource for all researchers in the solid Earth sciences.

The Pillars of the Earth Oct 01 2022 #1 New York Times Bestseller Oprah's Book Club Selection The "extraordinary . . . monumental masterpiece" (Booklist) that changed the course of Ken Follett's already phenomenal career—and begins where its prequel, The Evening and the Morning, ended. "Follett risks all and comes out a clear winner," extolled Publishers Weekly on the release of The Pillars of the Earth. A departure for the bestselling thriller writer, the

historical epic stunned readers and critics alike with its ambitious scope and gripping humanity. Today, it stands as a testament to Follett's unassailable command of the written word and to his universal appeal. The Pillars of the Earth tells the story of Philip, prior of Kingsbridge, a devout and resourceful monk driven to build the greatest Gothic cathedral the world has known . . . of Tom, the mason who becomes his architect—a man divided in his soul . . . of the beautiful, elusive Lady Aliena, haunted by a secret shame . . . and of a struggle between good and evil that will turn church against state and brother against brother. A spellbinding epic tale of ambition, anarchy, and absolute power set against the sprawling medieval canvas of twelfth-century England, this is Ken Follett's historical masterpiece.

Inheritors of the Earth Jan 12 2021 Human activity has irreversibly changed the natural environment. But the news isn't all bad. It's accepted wisdom today that human beings have permanently damaged the natural world, causing extinction, deforestation, pollution, and of course climate change. But in Inheritors of the Earth, biologist Chris Thomas shows that this obscures a more hopeful truth -- we're also helping nature grow and change. Human cities and mass agriculture have created new places for enterprising animals and plants to live, and our activities have stimulated evolutionary change in virtually every population of living species. Most remarkably, Thomas shows, humans may well have raised the rate at which new species are formed to the highest level in the history of our planet. Drawing on the success stories of diverse species, from the ochre-colored comma butterfly to the New Zealand pukeko, Thomas overturns the accepted story of declining biodiversity on Earth. In so doing, he questions why we resist new forms of life, and why we see ourselves as unnatural. Ultimately, he suggests that if life on Earth can recover from the asteroid that killed off the dinosaurs, it can survive the onslaughts of the technological age. This eye-opening book is a profound reexamination of the relationship between humanity and the natural world.

When Time Began May 16 2021 Night and day, month after month, year after year, our ancestors dutifully recorded the passage of time on clay tablets, watching the heavens from stage towers and pyramids and from megalithic monuments whose incredible size and precise architecture boggle the mind. . . . Who were the builders of these mysterious structures? What was their purpose? Whose signature is indelibly written on these timeless stones, and who was the Divine Architect? Why was Stonehenge and its likes built by ancient civilizations at the very same time--4,100 years ago? What is their message for our time? With these questions in mind, Zecharia Sitchin, renowned researcher of past ages, takes us on a journey through the records of time in this, the fifth book of his Earth Chronicles series. Drawing deeply on Sumerian and Egyptian writings, millenia-old artifacts, and sacred architecture ranging from ancient Mesopotamia to pre-Columbian civilizations in the Americas, this bestselling scholar provides astounding insights into the origins of the calendar, astronomy, and astrology. He takes readers to the climax circa 2100 b.c. when Marduk, the Babylonian national god, attained supremacy on Earth and proclaimed the New Age of Aries--after which society, religion, science, and the status of women were never the same.

The Science of the Earth Jan 24 2022 Elegant design combined with beautiful images to explore and explain Earth's natural riches. This is an informative, visually arresting introduction to planet Earth. The core of the ebook features large, detailed photographs of single objects, many of them small enough to be held in the hand, that each speak volumes about an aspect of Earth's environments and how they work. For example, bubbles of ancient air trapped inside an Antarctic ice core reveal how Earth's climate has changed over time. A piece of pumice thrown several miles into the air by a volcano helps to explain what happens when tectonic plates

collide. The ebook is structured around an imaginary journey that takes the reader from the inner core to Earth's surface (including both land and oceans) and up to the top of the atmosphere. Taking in environments such as grasslands, forests, and reefs, the coverage includes both living and inanimate realms. Feature spreads each throw a spotlight on an iconic place, such as the Amazon Rainforest or the Dead Sea, or a particular process, such as glacial erosion. Many of the most fascinating parts of the natural world are beyond reach. This beautiful, informative book brings them up-close and within our grasp.

The Ancient Egyptian Books of the Afterlife Jun 28 2022 This volume offers a survey about what is known about the Ancient Egyptians' vision of the afterlife and an examination of these beliefs that were written down in books that were later discovered in royal tombs. The contents of the texts range from the collection of spells in the *Book of the Dead*, which was intended to offer practical assistance on the journey to the afterlife, to the detailed accounts of the hereafter provided in the *Books of the Netherworld*. The author looks closely at these latter works, while summarizing the contents of the *Book of the Dead* and other widely studied examples of the genre. For each composition, he discusses the history of its ancient transmission and its decipherment in modern times, supplying bibliographic information for any text editions. He also seeks to determine whether this literature as a whole presents a monolithic conception of the afterlife. The volume features many drawings from the books themselves.

Poetics of the Earth Jun 24 2019 *Poetics of the Earth* is a work of environmental philosophy, based on a synthesis of eastern and western thought on natural and human history. It draws on recent biological research to show how the processes of evolution and history both function according to the same principles. Augustin Berque rejects the separation of nature and culture which he believes lies at the root of the environmental crisis. This book proposes a three stage process of "re-worlding" (moving away from the individualized self to become a part of the common world), "re-concretizing" (understanding the meaning and historical development of words and things) and "re-engaging" (reconsidering the relationship between history and subjectivity at every level of being) in order to bring western thought on nature and culture into sustainable harmony and alignment. This book will be of great interest to students and scholars of environmental studies, environmental philosophy, Asian studies and the natural sciences.

Images of the Earth Sep 27 2019 Entertaining yet serious, this text examines every facet of the Earth's surface: the ocean depths, paths of hurricanes, the productivity of forests and farms, where mineral riches lie, the damage that we humans do and the tragedy of nature's own catastrophes.

Language of the Earth Aug 19 2021 *Language of the Earth* is a collection of essays that provides a particular category of and describes the current content in each area of earth science. The book reviews various aspects of geological knowledge, including the characters, motives, and attitudes of certain individuals who have made contributions in this field. Case studies of eyewitness accounts of geological phenomena include the Turtle Mountain slide, the Lisbon earthquake, the 1906 San Francisco earthquake, the eruption of the Oraefajokull in 1727. The text also discusses some geological controversies such as the footprints in red sandstone, as well as geological philosophies concerning estimates of time since the Earth has

existed. The book cites 3000-year old Chinese records chronicling earthquake activity; it also discusses earthquakes and the hypothesis of continental drift. The text then explains the many ways in which geology can relate to the person—in his approach to his work, the personal touch. Geology is shown in terms of its relation to prose, poetry, and sometimes, humor, as in the discovery of the "petrified woman." This book can offer a light and entertaining respite for geologists, historians, students or professors of the earth sciences, and for general readers interested in personal accounts of some geological discoveries.

Mirrors in the Earth Mar 14 2021 A nature therapy session for the soul--encounter the benevolence of the living world through 12 essays on the Earth-healing powers of self-compassion and empathy. When healing is needed at the deepest level, nature will always call us back home--not only to the oak woods or water-filled coves, but to the homes within ourselves. In a series of 12 lyrical nature essays, herbalist, writer, and Earth intuitive Asia Suler illuminates the healing power of the living Earth--and gives us permission to nurture self-compassion and empathy as forces for personal and ecological healing. In a time of unprecedented ecological devastation, it's easy to feel hopeless and disconnected. It's easier still to mask our inherent goodness--to imagine that our unique and precious gifts simply aren't enough, or forget the power of our inborn empathy. For those of us who are highly sensitive, innately attuned to the workings and whispers of the natural world, it can be hard to embody the belief that we're enough as we are--and that can heal the Earth. Here, Suler reveals the opposite: our goodness, our empathy, our intuitive connections, and our capacity for self-compassion are more than personal traits or antidotes to despair: they are, in fact, our most potent vehicles for planetary transformation. And as we learn to more deeply nurture and accept ourselves, we unlock living, healing connections to Earth. Combining poetic nature writing with exercises and reflection prompts at the end of each essay, *Mirrors in the Earth* coaxes us to come as we are: to discover and tend the inherent brilliance and medicine that lives in each of us. From the manatee-calm springs of wild Florida to the flower-dotted coves of the world's most biodiverse mountains, *Mirrors in the Earth* is an invitation and encounter with the benevolence of the living world--and a nature therapy session for the soul.

The Pulse of the Earth Apr 02 2020

Origin of the Earth and Moon Sep 07 2020 Since the beginning of civilization, the origins of the Earth and Moon have been the subjects of continuing interest, speculation, and enquiry. These are also among the most challenging of all scientific problems. They are, perhaps to a unique degree, interdisciplinary, having attracted the attention of philosophers, astronomers, mathematicians, geologists, chemists, and physicists. A large and diverse literature has developed, far beyond the capacity of individuals to assimilate adequately. Consequently, most of those who attempt to present review-syntheses in the area tend to reflect the perspectives of their own particular disciplines. The present author's approach is that of a geochemist, strongly influenced by the basic philosophy of Harold Urey. Whereas most astronomical phenomena are controlled by gravitational and magnetic fields, and by nuclear interactions, Urey (1952) emphasized that the formation of the solar system occurred in a pressure-temperature regime wherein the chemical properties of matter were at least as important as those of gravitational and magnetic fields. This was the principal theme of his 1952 book, "The Planets," which revolutionized our approach to this subject. In many subsequent papers, Urey strongly emphasized the importance of meteorites in providing critical evidence of chemical conditions in the primordial solar nebula, and of the chemical fractionation processes which occurred during formation of the terrestrial planets. This approach has been followed by most subsequent geochemists and cosmochemists.

Measure of the Earth Aug 26 2019 In the early eighteenth century, at the peak of the Enlightenment, an unlikely team of European scientists and naval officers set out on the world's first international, cooperative scientific expedition. Intent on making precise astronomical measurements at the Equator, they were poised to resolve one of mankind's oldest mysteries: the true shape of the Earth. In Measure of the Earth, award-winning science writer Larrie D. Ferreiro tells the full story of the Geodesic Mission to the Equator for the very first time. It was an age when Europe was torn between two competing conceptions of the world: the followers of René Descartes argued that the Earth was elongated at the poles, even as Isaac Newton contended that it was flattened. A nation that could accurately determine the planet's shape could securely navigate its oceans, giving it great military and imperial advantages. Recognizing this, France and Spain organized a joint expedition to colonial Peru, Spain's wealthiest kingdom. Armed with the most advanced surveying and astronomical equipment, they would measure a degree of latitude at the Equator, which when compared with other measurements would reveal the shape of the world. But what seemed to be a straightforward scientific exercise was almost immediately marred by a series of unforeseen catastrophes, as the voyagers found their mission threatened by treacherous terrain, a deeply suspicious populace, and their own hubris. A thrilling tale of adventure, political history, and scientific discovery, Measure of the Earth recounts the greatest scientific expedition of the Enlightenment through the eyes of the men who completed it—pioneers who overcame tremendous adversity to traverse the towering Andes Mountains in order to discern the Earth's shape. In the process they also opened the eyes of Europe to the richness of South America and paved the way for scientific cooperation on a global scale.

The Mantle of the Earth May 28 2022 The term mantle has inspired philosophers, geographers, and theologians and shaped artists' and mapmakers' visual vocabularies for thousands of years. According to Veronica della Dora, mantle is the "metaphor par excellence, for it unfolds between the seen and the unseen as a threshold and as a point of tension." Featuring numerous illustrations, The Mantle of the Earth: Genealogies of a Geographical Metaphor is an intellectual history of the term mantle and its metaphorical representation in art and literature, geography and cartography. Through the history of this metaphor from antiquity to the modern day, we learn about shifting perceptions and representations of global space, about our planetary condition, and about the nature of geography itself.

Scum of the Earth Aug 31 2022 A brand new edition of Arthur Koestler's gripping tale of arrest, imprisonment, and subsequent escape to London from Nazi-occupied France. Arthur Koestler is now an essential part of the English literary landscape both as political activist, controversialist and the author of Darkness at Noon. He stands beside George Orwell as one of the key writers of the twentieth century who embraced communism but would later turn against the party and

denounce the tragic distortions and abuses that had betrayed the great vision.

The Face of the Earth: Environment and World History Nov 09 2020 Although the organizing principle of virtually every world history text is "development", the editor of this volume maintains that this traditional approach fails to address the issue of sustainability. By adopting the ecological process as their major theme, the authors show how the process of human interaction with the natural environment unfolded in the past, and offer perspective on the ecological crises in our world at the beginning of the 21st century. Topics range from broad regional studies that examine important aspects of the global environment that affect nations, to a study of the widespread influence of one important individual on his nation and beyond. The authors take different approaches, but all share the conviction that world history must take ecological process seriously, and they all recognize the ways in which the living and non-living systems of the earth have influenced the course of human affairs.

Foundations of the Earth Sep 19 2021 "Where were you when I laid the foundation of the earth?" God asks Job in the "Whirlwind Speech," but Job cannot reply. This passage—which some environmentalists and religious scholars treat as a "green" creation myth—drives renowned ecologist H. H. Shugart's extraordinary investigation, in which he uses verses from God's speech to Job to explore the planetary system, animal domestication, sea-level rise, evolution, biodiversity, weather phenomena, and climate change. Shugart calls attention to the rich resonance between the Earth's natural history and the workings of religious feeling, the wisdom of biblical scripture, and the arguments of Bible ethicists. The divine questions that frame his study are quintessentially religious, and the global changes humans have wrought on the Earth operate not only in the physical, chemical, and biological spheres but also in the spiritual realm. Shugart offers a universal framework for recognizing and confronting the global challenges humans now face: the relationship between human technology and large-scale environmental degradation, the effect of invasive species on the integrity of ecosystems, the role

of humans in generating wide biotic extinctions, and the future of our oceans and tides.

Songs of the Earth Jul 30 2022 SONGS OF THE EARTH is the most compelling debut fantasy novel since Patrick Rothfuss first hit the shelves four years ago, with the stunning THE NAME OF THE WIND. The Profit of the Earth Dec 31 2019 While there is enormous public interest in biodiversity, food sourcing, and sustainable agriculture, romantic attachments to heirloom seeds and family farms have provoked misleading fantasies of an unrecoverable agrarian past. The reality, as Courtney Fullilove shows, is that seeds are inherently political objects transformed by the ways they are gathered, preserved, distributed, regenerated, and improved. In The Profit of the Earth, Fullilove unearths the history of American agricultural development and of seeds as tools and talismans put in its service. Organized into three thematic parts, The Profit of the Earth is a narrative history of the collection, circulation, and preservation of seeds. Fullilove begins with the political economy of agricultural improvement, recovering the efforts of the US Patent Office and the nascent US Department of Agriculture to import seeds and cuttings for free distribution to American farmers. She then turns to immigrant agricultural knowledge, exploring how public and private institutions attempting to boost midwestern wheat yields drew on the resources of willing

and unwilling settlers. Last, she explores the impact of these cereal monocultures on biocultural diversity, chronicling a fin-de-siècle Ohio pharmacist's attempt to source Purple Coneflower from the diminishing prairie. Through these captivating narratives of improvisation, appropriation, and loss, Fullilove explores contradictions between ideologies of property rights and common use that persist in national and international development—ultimately challenging readers to rethink fantasies of global agriculture's past and future.
