Global Design to Gain a Competitive Edge Sep 22 2019 Recent rapid globalisation of manufacturing industries leads to a drive and thirst for rapid advancements in technological development and expertise in the fields of advanced design and manufacturing, especially at their interfaces. This development results in many economical benefits to and improvement of quality of life for many people all over the world. Technically speaking, this rapid development also create many opportunities and challenges for both industrialists and academics, as the design requirements and constraints have completely changed in this global design and manufacture environment. Consequently the way to design, manufacture and realise products have changed as well. The days of designing for a local market and using local suppliers in manufacturing have gone, if enterprises aim to maintain their competitiveness and global expansion leading to further success. In this global context and scenario, both industry and the academia have an urgent need to equip themselves with the latest knowledge, technology and methods developed for engineering design and manufacture. To address this shift in engineering design and manufacture, supported by the European Commission under the Asia Link Programme with a project title FASTAHEAD (A Framework Approach to Strengthening Asian Higher Education in Advanced Design and Manufacture), three key project partners, namely the University of Strathclyde of the United Kingdom, Northwestern Polytechnical University of China, and the Troyes University of Technology of France organised a third international conference.

China's Industrial Technology Oct 28 2022 Offering a comprehensive review of reform policy, followed by an examination of major approaches to institutional restructuring, Shulin Gu explores the way in which China's industrial technology has responded to economic reforms. At the heart of the work is the argument that market reform and organisational change are closely interdependent. Gu outlines the interaction of the two in China and reveals the damage which may result if market reform is not accompanied by new organisational design. Analysis of these issues is drawn from first-hand experience of Chinese technology systems, supported by insights from technological innovation economics and transaction cost economics.

The Making of a Chinese City: History and Historiography in Harbin Dec 06 2020 The history of Harbin, ruled by the Russians, by an international coalition of allied powers, by Chinese warlords, by the Soviet Union and finally by the Chinese Communists - all in the course of 100 years - is presented here as an example of Chinese local-history writing.

Economic Gangsters Jan 27 2020 Meet the economic gangster. He's the United Nations diplomat who double-parks his Mercedes on New York City streets at rush hour because the cops can't touch him--he has diplomatic immunity. He's the Chinese smuggler who dodges tariffs by magically transforming frozen chickens into frozen turkeys. The dictator, the warlord, the unscrupulous bureaucrat who bilks the developing world of billions in aid. The calculating crook who views stealing and murder as just another part of his business strategy. And, in the wrong set of circumstances, he might just be you. In *Economic Gangsters*, Raymond Fisman and Edward Miguel take readers into the secretive, chaotic, and brutal worlds inhabited by these lawless and violent thugs. Join these two sleuthing economists as they follow the foreign aid money trail into the grasping hands of corrupt governments and shady underworld characters. Spend time with ingenious black marketeers as they game the international system. Follow the steep rise and fall of stock prices of companies with unseemly connections to Indonesia's former dictator. See for yourself what rainfall has to do with witch killings in Tanzania--and more. Fisman and Miguel use economics to get inside the heads of these "gangsters," and propose solutions that can make a difference to the world's poor--including cash infusions to defuse violence in times of drought, and steering the World Bank away from aid programs most susceptible to corruption. In a new postscript, the authors look at how economists might use new tools to better understand, and fight back against, corruption and violence in the aftermath of the 2008 financial crisis. Take an entertaining walk on the dark side of global economic development with *Economic Gangsters*.

China's Compliance with World Trade Organization Obligations: A Review of China's First Two Years of Membership Feb 20 2022 This book takes a look at the first two years of China's membership in the WTO and attempts to assess the level of China's WTO compliance achieved to date and the problems that remain ahead. In particular, the book examines: - China's modification to its laws and regulations, China's participation in WTO committee work, and technical assistance programs available to China from the WTO, the US and other member nations; - How effectively the WTO's first and second Transitional Review Mechanisms have operated; - The US-China bilateral relationship and structures in place for discussion of US-China trade issues and major WTO compliance issues; - The monitoring of China's WTO compliance by the US government and private sector groups, as well as a survey of the important compliance issues that arose in the first two years of China's WTO membership; - The use made by the US of transitional rights outlined in China's accession agreement, in particular, the textile and product-specific safeguards, and the non-market economy methodology used in antidumping proceedings concerning products from China. Published under the Transnational Publishers imprint.

China Shakes The World Oct 16 2021 Authoritative and fully up-to-date account by leading China expert on China's economic rise and how it will affect the world The new China, the nation that in 25 years has changed beyond all recognition is becoming an industrial powerhouse for the world. James Kynge shows not only the extraordinary rise of the Chinese economy, but what the future holds as China begins to influence the world. On the eve of the British industrial revolution some 230 years ago, China accounted for one third of the global economy. In 1979, after 30 years of Communism, its economy contributed only two per cent to global GDP. Now it is back up to five per cent, and rising. Although China is already a palpable force in the world, its re-emergence is only just starting to be felt. Kynge shows China's weaknesses - its environmental pollution, its crisis in social trust, its weak financial system and the faltering institutions of its governments - which are poised to have disruptive effects on the world. The fall-out from any failure in China's rush to modernity or simply from a temporary economic crash in the Chinese economy would be felt around the world.

Mechanical Engineering and Control Systems Sep 15 2021 This book consists of 113 selected papers presented at the 2015 International Conference on Mechanical Engineering and Control Systems (MECS2015), which was held in Wuhan, China during January 23–25, 2015. All accepted papers have been subjected to strict peer review by two to four expert referees, and selected based on originality, ability to test ideas and contribution to knowledge. MECS2015 focuses on eight main areas, namely, Mechanical Engineering, Automation, Computer Networks, Signal Processing, Pattern Recognition and Artificial Intelligence, Electrical Engineering, Material Engineering, and System Design. The conference provided an opportunity for researchers to exchange ideas and application experiences, and to establish business or research relations, finding global partners for future collaborations. The conference program was extremely rich, profound and featured high-impact presentations of selected papers and additional late-breaking contributions. Contents: Mechanical Engineering and Manufacturing Technologies Automation and Control Engineering Communication Networking and Computing Technologies Signal Processing and Image Processing Pattern Recognition and Artificial Intelligence Micro

Electromechanical Systems Technology and Application Material Science and Material Engineering System Design and Simulation Sustainable City and Sustainable Development Readership: Researchers and graduate students interested in mechanical engineering and control systems. Key Features: It is one of the leading international conferences for presenting novel and fundamental advances in the fields of Mechanical Engineering and Control Systems The proceedings put together the most up-to-date, comprehensive and worldwide state-of-the-art knowledge in Mechanical Engineering and Control Systems Many of the articles are the output of research funded by Chinese research agencies, representing the state-of-the-art technologies in Chinese engineering R&D Keywords: Mechanical Engineering; Automation; Computer Networks; Signal Processing; Pattern Recognitions and Artificial Intelligence; Electrical Engineering; Material Engineering; System Design
